

**BIODIVERSITY AND
ECOSYSTEM**

OF MARINE WATER

CAUSE :

Global warming is causing sea levels to rise, threatening coastal population centers. Many pesticides and nutrients used in agriculture end up in the coastal waters, resulting in oxygen depletion that kills marine plants and shellfish. Factories and industrial plants discharge sewage and other runoff into the oceans.

THREATS TO THE ECOSYSTEM AND BIODIVERSITY

Threats are manifold: i.e., primarily from overexploitation of marine resources, overfishing, climate warming, sewage disposal, industrial chemical discharge, oil spills, invasive species, and dredging. The Corals are particularly fragile animals and very sensitive to changes in temperature and salinity.

THANK
YOU

PRESENTATION BY- A033 SANVI BADGE

be considerate of marine life

keep beaches and waterways clean

get involved

**spread the word about the need
for ocean conservation**
